Special Report: AI-HPC is Happening Now

insideHPC Special Report: AI-HPC is Happening Now

[Get This White Paper](#)

People speak of the Artificial Intelligence (AI) revolution where computers are being used to create data-derived models that the end result has been an explosive adoption of the technology that has also fueled a number of extraordinary scientific, algorithmic, and HPC is on the rise and is growing in popularity throughout the industry.

Using AI to make better and more informed decisions as well as autonomous decisions means bigger and more complex data sets. HPC and the data driven AI communities are converging as they are arguably running the same types of data and computational workloads. Whether it's a leadership class supercomputer, small institutional cluster, or in the cloud.

This white paper is a high level educational piece that will address this convergence, the existing ecosystem of affordable HPC, and how everyone can use. Use cases will be provided to illustrate how people apply these AI technologies to solve HPC problems.
